The actions of Sahab municipality to limit the spread of Corona epidemic

#Our King , Sahab is responding
Our Vision

- In such crises and challenges, the mayor of Sahab was side by side with all the employees as we believe that we are all soldiers to serve this country (we are all in the ditch of the homeland).

- Messenger of Allah (ﷺ) said, "The relationship of the believer with another believer is like (the bricks of) a building, each strengthens the other."
Start of the crisis

Since the repercussions of the COVID-19 epidemic began in China and spread to some other countries in the world, the municipality has begun a state of emergency to prepare in case of the virus invading Jordan.

The municipality formed a crisis management team on 2/2/2020, where it considered that this crisis is likely to extend to Jordan in the coming days.

The team has initiated a plan to deal with the crisis if it reaches the area.
The planning stage - the proactive step

• Form teams that will be responsible for spraying and sterilization operations.
• Purchase new pumps.
• Awareness through social media.
• Make a list of the most important places to be sterilized in the event of spreading.
• The necessity of distributing public safety requirements in public areas such as schools.
• Make a list of general safety instructions for employees.
The most important principles that the municipality apply through the crisis

- The safety of the citizen is our top priority
- Launching the emergency status as soon as possible, which helped contain the problem
- Awareness and media update - An ounce of prevention is better than a pound of cure
- Consult specialists to ensure that media awareness is consistent with medical information
- Eliminate all employee salary discounts.
- Distribute the service equally to citizens
- To consider every person, including the Syrian refugees, an integral part of society.
1/3/2020

• On Sunday 1/3/2020, the municipality purchases all the requirements to ensure the success of its plan.

• The municipality has started publishing social awareness such as: brochures, which will be detailed below.
Implementation phase - before the curfew
1- Distribution of public safety requirements

• The municipality believes that we should protect our children in schools so it distribute Sterile material and brochures to schools and government institutions.

• Distributing masks to schools.

• Create a biological risk prevention plan for school officials and school health counselors.
2- Distributing public safety requirements to bank customers

• As part of the team members, the head of the municipality distributed masks and gloves to the bank references to help contain the crisis.
3- Protection of employees and precautionary actions

- Awareness bulletins have been published among employees to protect them.
- Part-time work was applied between them to maintain safe distances and prevent overcrowding.
4- Spraying and sterilization works

- Among the most important things that the municipality has noticed is the planning of spray works to reduce the spread of the epidemic.
- The municipality divides the map into several neighborhoods to ensure that sterilization operations cover the whole entire region.
Sterilization works for public transport buses
Sterilization works for gas trucks
Sterilization works for ATMs
5- The social awareness works - publishing brochures

- the municipality considered that it should be mainly responsible for social awareness and transferring the correct information after consulting health professionals.
- awareness was published through electronic screens in the first place and in the city center.
لماذا الحجر المنزلي؟!

المجموعة A: هم أول حاملي العدوى
- أفراد العائلة
- الأصدقاء
- زملاء العمل
- الجيران
- البائع
- موظف التوصيل
- وغيرهم

مهمة B: خالطوا المصاب ويربطون معه بعلاقة قرابة أو صداقة أو عمل

يسهل تحديدهم
#المركز الإعلامي #بلدية_سحاب
المجموعة C هي المجموعة المجهولة التي انتقلت إليها العدوى من المجموعتين A و B بمجرد تصادفهما في الأماكن العامة.

لا يمكن معرفتهم من خلال التقيي.
قد لا يكونوا مصابين بعدم ظهور أعراض حالياً.
قد ينفلو العدوى للكثير من الأشخاص قبل أن يعلموا أنهم مصابين.

خالطا المصابين دون علمهم.

قد لا تعلم هذه المجموعة أنها مصابة ويسعف العثور عليها من خلال التقيي.

#المركز_الاعلامي #بلدية_سحاب
لماذا الحجر المنزلي؟

وتكد بأن الإطباق النفايات مغلقة بإحكام ووضعب داخل الحاوية وذلك حرصا من تنقل أي عدوى.

فترة حضانة الفيروس 14 يوم خلال هذه الفترة سوف تظهر الأعراض على المجموعة C

وعندها يسهل معرفتهم

#المركز_الاعلامي #بلدية_سحاب
كيف تحافظ
على صحتك
وتحبط انتشار
فيروس الكورونا

عزبي الموطن
لسلامتك وسلامة الوطن
يرجى الالتزام
وترك مسافة متررين على الأقل
 أثناء التسوق وشراء حاجياتك

مع تحيات
بلدية سحاب
Curfew stage
1-Lunching Hashtag
#Our King , Sahab is responding

In response to King Abdullah II Ibn Al-Hussein the municipality of Sahab launched a Hashtag:

#Our King , Sahab is responding
2- Supporting the Arab army and appreciating their efforts

- The mayor of Sahab support our armed forces and Public Security Directorate at the entrance to the city of Sahab.
- The municipality of Sahab provided them with the necessary sterilizers and safety tools and sterilized their car.
3- Implementing the rules of public safety

- Municipality specify guidelines to limit the distance between citizens.
4- The delivery of chronic medications
5- Increasing the control of commercial shops
In another step, to urge citizens to stay in their homes and occupy them with what is beneficial. The municipality donated 200 books and sponsored the Sahab Cultural Forum and educated youth in the city, and the municipality distributes the books after sterilization to citizens upon request.
7- Awareness lectures

• The municipality is hosting the doctors (Dr. Mahmoud Abu Saud and Dr. Muhammad Al-Hawadi) to give an awareness lecture.
8- Sterilization of Totanji Hospital
Challenges

1- The lack of necessary mechanisms and equipment

2- Lack of labor and machinery. (The need for a water tank and a tank).

3- The need for special pumps.

4- The city's total population of 168,000, of whom 45,000 are Syrian refugees.

5- The large number of Syrian refugees, as mentioned, because - and the need to support them.
Adjustments to the spraying mechanisms to be sufficient to sterilize the largest possible area.
Future plans to ensure work sustainability

• Continuous spray and sterilization works.
• Continuous awareness brochures.
• Issue instructions to employees to maintain safety distances between them.
• The municipality will make an engineering design, so that the offices are rearranged in a manner that maintains sufficient distances between the employees, and the model will be implemented in all municipalities.
