North Africa perspectives

Alonso Zapata
Concessions Manager & Business Development
GS Inima / Spain – South Korea

14 Dec, 2016
End of world financial crisis

Low rates of growth (4% 2017-2018) compared to the historical data

Low price of commodities

Back ing of multilateral financing institutions

Water scarcity

Agricultural demands

Increasing pressure from population growth & migratory phenomena
Need of securing water supply
Projects of irrigation from desalted water
Fast response from governments in the region brings a light for desalination

The region is more than ready for boosting desalination and in some cases it’s been already done
Algeria & Morocco have vast experience in PPP/BOT schemes in desalination and renewables
Now it’s the turn of making hybrid systems between water and renewables
Long term PPP and BOT’s in desalination will secure a quality and reliable water supply for population and agriculture (long-term engagement)
Ideal solution in terms of value for money
Thanks!
